

Supplemental Figure 1: Expression of SREBP-1c proteins, SREBP-1c target genes and ER stress markers in fa/+ and fa/fa rats. Livers from 12 week-old fa/+ and fa/fa rats were used to prepare nuclear extracts, microsomes and total RNA. A) Immunoblot analysis of SREBP-1c precursor (pSREBP-1c), nuclear SREBP-1c (nSREBP-1c) and lamin A/C from fa/+ and fa/fa mice (left panel). Quantification by RTQ-PCR of SREBP-1c and FAS mRNA in the livers of fa/+ and fa/fa mice (right panel). (B) Immunoblot analysis of XBP-1 in nuclear extracts from lean and obese rats (left panel). Quantification of XBP-1, GRP78, ATF4, and EDEM mRNA levels by RTQ-PCR. Results are the mean \pm SE, n = 4-5 animals per group. *, ** show statistical difference at $p < 0.05$ or $p < 0.01$ when compared to lean animals (fa/+).
